Plan

Hi Raul,

It was good to see you and your parents. Your MSQ is stable at 9.

I am glad you have been able to achieve ketosis at a therapeutic level. You are reporting many improvements since getting ketones in an average range of 2 including mood improvements, absence of psychotic symptoms, weight loss, higher energy, skin and hair improvements, and optimal GI function. I am glad this is motivating you to sustain this lifestyle while still at RISD and beyond. Of course, once you are back home, it will be easier to choose a wider variety of foods that will still keep you in ketosis.

Long term, it will be important to have a team to support you, especially if you reduce or eliminate medications in time. This will be a long process over a year at least. We can discuss this in future sessions. It would be better to stay in the Boston area as there are very few people like me doing this work. It will be hard to find someone in San Francisco and you will be farther away from your family. May I suggest that you wait until you are finish this work first and then plan to move there in a couple of years.

This is your optimal health plan and D.R.E.S.S.® Protocol. DRESS stands for diet, rest, exercise, stress, and supplements. Any hyperlinks will need to be copied and pasted.

ACTION ITEMS:

- Please ask your psychiatrist and/or PA-C to reduce the Invega medication slightly
 - You have been stable for many months and are using interventions to support brain health/mental health
 - The standard of care is to reduce to the lowest, effective dose of the psychotropic medication and your dose is quite high. It may have been necessary to address the acute need, but now you have been symptom free for quite some time post hospitalization. It is now time to transition to a "maintenance dose" because of the long term risks of these medications, eg., tardive dyskinesia. (TD), a potentially irreversible movement disorder.
- Explore Dr Ede's Website: <https://www.diagnosisdiet.com/> for a provider in PR
- Schedule a one time consultation with Dr Matt Bernstein in Boston. He is not taking new 1:1 patients. You may contact him at 617-714-4593 or email at mbernstein@ellenhorn.com
- On the next pre-appt form add in ALL of the medications and supplements you are taking including the Invega sustenna please
- Since you are on Lithium, serum creatinine levels need to be monitored closely as lithium can affect kidney function over time - watch the trend of the Creatinine despite it being within normal range
- Vitamin B12 is improved but not optimal. I am not concerned about LDL cholesterol. It will improve with time. All other numbers are fine.
 - Labcorp. Results 11/20/25 Chol - 200 H, Trig - 49, HDL - 61, LDL - 130H, Folate - >20, Homocysteine - 7, **Vit B12 - 695**, Insulin - 0.8
- Repeat MycoTOX test in February 2026
 - You may have it shipped or pick it up at the office. Please connect with Carol.
 - Follow instructions below including what to avoid for 48 hours ahead of testing
- **LABCORP - draw Vitamin D and Vitamin A - labslip uploaded into Intake Q. It would be great if you could get this completed before you leave for PR.**

MEDICATIONS (carried over from the previous plan for reference):

- The ketogenic diet is meant to be a treatment to replace medication if you choose. With time, you will be able to discontinue the Prosom and lamotrigine. I know the plan is to increase the lithium and hopefully slowly reduce the Invega Sustenna progressively to the lowest effective dose. If the IM shot is causing that much discomfort, you may want to discuss with Dr. Luz about converting to oral administration. You are quite disciplined and likely not to miss any doses. **Also Dr. Bernstein indicated that the tapering is better managed with first switching Invega to oral dose.** There are long term side effects of this class of medications that you will want to avoid. Work closely with your psychiatrist on this and monitor for sleep change as a first sign for mania or psychosis. Don't ignore slight shifts.

DIET:

- You are doing a great job working with the kitchen at RISD to formulate keto-friendly meals
- Stick with the rotation of foods that are working for you at this time:
 - Pork, fish, chicken, leeks, cauliflower, mushrooms, avocado, squash, and duck fat
- **Your "sweet spot" is around 2.** Try to stay there as much as possible. Your insulin level is almost too low. Lets try to keep it around 3-4.

Hydration

- Aim for half your weight in ounces, but have your hydration be consistent daily so that your body can acclimate and Lithium levels are not affected since they are processed via the kidneys.
- We DO NOT recommend electrolytes while you are on Lithium

REST:

- Sleep is directly affected by the size and time of your evening meals
- For now, do the best you can, but when you are back in Puerto Rico or out of school, it sounds like eating your last meal around 4-5pm works best to enhance sleep

EXERCISE:

- Continue with your exercise regimen. I am glad you have more time for working out
- Continue walking and strength training

STRESS REDUCTION:

- Continue to work with Nancy on a stress reduction practice that resonates with you
- You said you have a lot of time on your hands -> MEDITATE!! Breathwork!

SUPPLEMENTS:

Always sequence and titrate new supplements:

- Sequence - start each supplement one at a time for at least 2 days
- Titrate - some supplements will need to be increased gradually.

FINISH and DISCONTINUE

- Zinc Picolinate 15 mg - 1 capsule daily with food
- Life Extension Super Ubiquinol CoQ10 with PQQ - 1 gel cap daily with food for mitochondrial support
 - Please note if there are any changes when stopping as this can always be restarted
- Ortho Molecular Orthobiotic - 1 capsule every night

CONTINUE

- Seeking Health Vitamin D3 K2 5000 - 2 capsules daily with food (we may adjust this when blood results come in)
- Metagenics PhytoMulti - take 2 tablets daily with food
- Vital Nutrients B6 + B Complex - take 1 capsule daily with food - to improve your homocysteine
- Nordic Naturals ProOmega 2000 - 2 gel caps daily with food to increase HDL and improve omega 3:6 ratio
- Vital Nutrients carnitine 500 mg 2X daily with food for mitochondrial support
- Cortisol Manager -2 capsules at bedtime

START

- **CitriDrops Nasal Spray** - spray each nostril once 2X a day for mold in the sinus cavity
 - ORDER HERE: <https://dr cristina.com/collections/nasal/products/citridrops-nasal-spray>

FINISH GUT RESTORATION - Repair and Re-inoculation Phase**FINISH MONTH 4**

- DFH ProBioMed 100- 100 billion CFU at bedtime for 1 month. This is a higher dose broad spectrum probiotic
- Apex Energetics Enterovite - Take 1 capsule 2 times daily.
- Megasporebiotic - 1 capsule twice daily -am and bedtime.
- Apex Energetics RepairVite GT - 1 scoop three times a day or 1.5 scoops twice daily.
- Pendulum Akkermansia 100mg - take 1 capsule daily with food

NOTE: we may need to restart GI Detox for a mold protocol since you only took it for 3 months, but we will wait until after the Mycotoxin Results come back

LABS

REPEAT MYCOTOXIN TEST INSTRUCTIONS \$325 - insurance does not pay for this.

- **Cease binders 6 days prior to taking test | Resume after**
- <https://mosaicdx.com/resource/urine-collection-kit-instructions/>

Stop binders for 6 days and avoid the following foods for 48 hours prior to mycotoxin testing:

- Cheese and sour milk products, Buttermilk, Sour cream
- Nuts, Peanuts, Cashews, Pecans, Walnuts, Brazil nuts
- Dried fruit, Raisins, Apricots, Prune, Figs, Dates
- Grains, Wheat, rice, oats
- Packaged and smoked meats, Sausages, Hot dogs, Corned beef, Pastrami, Smoked fish, Ham, Bacon
- Edible fungi, Mushrooms, Truffles

FOLLOW UP appointment February23, 2026 at 2:30pm via ZOOM

A link will be sent to you via email with the pre-appt form ahead of time.

You will receive a pre-appt form to complete 10 days before the appt. Please complete 48 hours or earlier than the appt to give time to get it uploaded into the computer. We don't want to take time during the appt to do this for my review

Let me know if you have any questions.

Achina Stein DO IFMCP
